

## PoE Switches, Injectors & Extenders

Save on installation time and money with DITEK's PoE Switches, Injectors and Extenders by delivering data and power over existing network cables.

Our switches incorporate green Ethernet power-saving technology that deactivates unused ports and adjusts power levels based on the cable length. Rack mount models are equipped with an innovative LCD display on the front that provides real-time power information.

DITEK's Injectors and Extenders eliminate the need to run AC power lines for your wireless access point, network camera or IP phone. Simply connect the PoE Injector to the LAN switch port, and use the existing infrastructure cabling to deliver DC power as well as transfer data. Increase an existing PoE connection beyond the 100 m (328 ft.) limit by installing one of our PoE Extenders.

DITEK's networking products offer flexible and simplistic power management with fewer points of failure.
